CHITBRIDGE GUIDE

Connect Tally to ChitBridge

Your Tally items appear in ChitBridge, and every ChitBridge order lands in Tally as a sales voucher — by itself, once, never twice.

About 15 minutes · One Windows PC with Tally · No changes inside Tally's data

1 · What it does

From Tally → ChitBridge	From ChitBridge → Tally
Your stock items and rates, matched by name or part number. Only what changed is sent.	Every order becomes a **Sales voucher**. When you mark it paid, a **Receipt**. As a buyer, a **Purchase** voucher with your input tax.

2 · Before you start

1. A Windows PC where **Tally Prime** (or Tally.ERP 9) is installed and your company opens.
2. The company's **GSTIN in Tally** is the same as the GSTIN in ChitBridge (**Settings › Your business**).
3. The PC stays on and online while you trade. Nothing to open on your router.

3 · Install

1. **In Tally:** press `F1` › Settings › Connectivity. Set **TallyPrime acts as: Both**, **Enable ODBC: Yes**, port **9000**. Keep the company open.
2. **In ChitBridge:** **Settings › Connectors › Tally › Download**. Your key is already inside the download — nothing to copy.
3. **On the Tally PC:** right-click the downloaded file › **Extract All**. Open the folder and double-click **start.cmd**.
4. Answer the few questions it asks (it suggests the answers). It tests Tally, brings in your items, and sets itself to start with Windows.
5. **Approve this PC** once: **Settings › Connectors › Running on your PCs** › Approve. It approves itself when the GSTINs match.

4 · Check it works

✓ **Catalogue** in ChitBridge shows your Tally items with their rates.
✓ **Settings › Connectors** shows Tally as **Running**, last seen a moment ago.
✓ Place a test order: within seconds the voucher is in Tally › **Day Book**, reference `CB-xxxxxxxx`.

5 · If something goes wrong

You see	Do this
start.cmd says it can't find its files	You opened it inside the zip. Right-click the zip › Extract All, then run start.cmd from the new folder.
"Checking Tally … failed"	Tally is closed or the setting in step 3.1 is off. Open the company; check `F1` › Settings › Connectivity.
"Waiting for approval"	Approve the PC: Settings › Connectors › Running on your PCs.
"STOP — GSTIN mismatch"	This Tally company belongs to another GSTIN. Use the right company, or download from the right ChitBridge account.
An order came but no voucher	Tally was closed. Nothing to do — it retries every 5 minutes and lands once.
"Voucher date is missing"	Free Educational Tally accepts only the 1st, 2nd and 31st. Answer **yes** to "Educational edition" in the setup.

> Still stuck? Send us the message on the screen — Settings › Help.

For your IT person

The kit is a Node.js 18+ program (start.cmd installs Node if missing). Settings live in `connector.json` beside it.

Task	Command
Bring items now	`node index.js sync-products --config connector.json`
Preview vouchers, post nothing	`node index.js once --config connector.json --dry`
Run and watch	`node index.js watch --config connector.json --sync-minutes 30`
Start with Windows / remove	`node index.js install` · `node index.js uninstall`

Ledgers (must exist in Tally; the watcher creates Sales, Cash, Bank): `partyLedger` (default Cash), `salesLedger`, `bankLedger`, `cashLedger`. As buyer (`"role": "both"`): Purchase, Input CGST/SGST/IGST.

When orders go to Tally: Settings › Policy › Orders go to the books — received · accepted (default) · completed · manual.

> Only `Company`, `Ledger`, `StockItem`, `Voucher` collections are sent. An unknown TYPE can freeze Tally's port until Esc is pressed in Tally.
